Statutory Mandate
R.I.G.L.42-7.2-5(d), the authorizing statute for the Executive Office of Health and Human Services (EOHHS), requests the Secretary to:

"Beginning in 2006, prepare and submit to the governor, the chairpersons of the house and senate finance committees, the caseload estimating conference, and to the joint legislative committee for health care oversight, by no later than March 15 of each year, a comprehensive overview of all Medicaid expenditures, outcomes, and utilization rates.

The overview shall include, but not be limited to, the following information:
(i) Expenditures under Titles XIX and XXI of the Social Security Act, as amended;
(ii) Expenditures, outcomes and utilization rates by population and sub-population served (e.g. families with children, children with disabilities, children in foster care, children receiving adoption assistance, adults with disabilities, and the elderly);
(iii) Expenditures, outcomes and utilization rates by each state department or other municipal or public entity receiving federal reimbursement under Titles XIX and XXI of the Social Security Act, as amended; and
(iv) Expenditures, outcomes and utilization rates by type of service and/or service provider.

The directors of the departments, as well as local governments and school departments, shall assist and cooperate with the secretary in fulfilling this responsibility by providing whatever resources, information and support shall be necessary."

Purposes of the Expenditure Report
Provide state policymakers with a comprehensive overview of state Medicaid expenditure to assist in assessing and making strategic choices about program coverage, costs, and efficiency in the annual budget process.

- Summarize Medicaid expenditures for eligible individuals and families covered by the health and human services departments.
- Show enrollment and expenditure trends for Medicaid coverage groups by service type, care setting, and delivery mechanism.
- Identify areas in the Medicaid program where the state has flexibility and control over the scope, amount and duration of coverage and services.
- Establish a standard format for tracking and evaluating trends in annual Medicaid expenditures within and across departments.
Overview

During SFY 2012 Rhode Island’s Medicaid program served approximately 228,000 Rhode Islanders, with an average of 193,000 enrolled at any one time. Twenty-two percent of Rhode Island’s population were enrolled in Medicaid for some part of SFY 2012. Program expenditures for SFY 2012 totaled approximately $1,783 million. Medicaid expenditure is divided among several state agencies, with $1,369 million of total expenditure managed in SFY 2012 by the Office of Health and Human Services (OHHS), and $366 million managed by the Department of Behavioral Healthcare, Developmental Disability and Hospitals (BHDDH).

Under the Medicaid program, the federal government is typically responsible for approximately half of total expenditure. In SFY 2012 the Federal Medical Assistance Percentage (FMAP) was 52.33%. The Federal Stimulus package increased the federal share substantially between October 1, 2008 and December 31, 2010, but had no impact on SFY 2012.

Between SFY 2008 and 2012, total Rhode Island Medicaid medical expenditures based on date of service have increased an average of 1.3 percent per year. This overall expenditure increase is associated with a 2.2 percent average annual increase in enrollment combined with a 0.9 percent overall average decrease in per member per month (PMPM) costs. The increase in enrollment and the decrease in PMPM can be added together to determine average annual expenditure growth.

Enrollment declined over the years SFY 2007 through 2009, but then increased in SFY 2010 back to higher than SFY 2007 levels and continued to increase in SFY 2011 and 2012. PMPM costs increased from SFY 2008-2010 and then decreased in SFY 2011 and 2012 to lower than 2008 levels, resulting in the negative average annual trend. These expenditure trends compare quite favorably to both national Medicaid expenditures and state commercial per member per month cost trends.

Populations Served

Medicaid serves four different primary populations, each with very different service needs and PMPM cost experience.

- **Adults with disabilities** account for the largest share of expenditure, with 2012 expenditure of $662 million, and an average PMPM cost of $1,808. The largest components of expenditure for this population are residential and rehabilitation services for persons with developmental disabilities (26%) and hospital care (25%).

- **Elders** account for $476 million in total 2012 Medicaid expenditure, and the highest average cost per member per month (PMPM) of $2,230. For this population, nursing facilities account for roughly two-thirds (65%) of expenditures.

- **Children and families** account for 69% of total enrollment and 27% of total expenditure, with total 2012 expenditure of $474 million. Additionally, the federal match is increased to 66.63% for qualifying “optional” low income children and pregnant women under the Children’s Health Insurance Program (CHIP).

(continued next page)
Children with special health care needs (CSHCN) account for 10 percent of total Medicaid expenditures and 6 percent of enrollees, with total 2012 expenditures of $170 million. Expenditures on this population are dominated by professional behavioral health services, which account for just under half (44%) of total expenditures.

Medicaid Providers

Medicaid pays for services offered by a variety of providers. Hospitals and nursing facilities together account for nearly half (46%) of program expenditure. Key contributors to expenditure growth were hospitals and professional providers.

- Hospitals were the largest provider type, accounting for 27 percent of Medicaid expenditure in 2012. Hospital payments are also a key driver of Medicaid expenditure growth – as payments to hospitals increased by an average of 4.0% per year between 2008-2012.

- Nursing facilities were the next largest provider type, accounting for 19% of expenditure in 2012. Expenditure on these providers has been increasing on average 2.0% per year between 2008-2012.

Managed Care

It is important to note that not all payments are made directly by Medicaid to service providers. Seventy-seven percent of Medicaid eligibles are now enrolled in managed care plans. These enrolled populations account for 49% of Medicaid expenditure.

- Children and families who are not eligible for employer sponsored or Medicare coverage are nearly all enrolled in managed care plans.

- Starting in 2008, children with special health care needs, without other insurance coverage were required to enroll in managed care plans, resulting in 79% of this population now enrolled in managed care. In addition new managed care programs were established in 2008 to transition Medicaid eligible adults with disabilities to managed care. In 2012 47% of adults with disabilities were enrolled in managed care.

- Rhode Island’s participating Medicaid Managed Care Health Plans have consistently ranked among the nation’s top performing Health Plans according to commonly used Healthcare Effectiveness Data and Information Set (HEDIS®) measures.

Community Care and Long Term Care

Expenditure on community care and long term care accounts for about 41% of total Medicaid expenditure ($724 million) in SFY 2012. Community care programs are intended to allow states to provide home and community based services to at-risk populations as alternatives to more costly nursing home/institutional options.
**Executive Summary (page 3 of 3)**

**Mandatory and Optional Services**
Most of the expenditure on optional services is designed to reduce expenditure for mandatory services. Optional services accounted for $507 Million in total Medicaid expenditure in SFY 2012, approximately 28% of total Medicaid expenditures. The largest component of optional services is residential and rehabilitation services for persons with developmental disabilities, including group homes. These services provide an important alternative to more expensive (mandatory) inpatient/institutional services for persons with developmental disabilities.

**High Cost Users**
Medicaid expenditures are highly concentrated, as the top seven percent of users account for nearly two-thirds (66%) of expenditures.

- High cost users are defined as those who incur $25,000 or more per year in Medicaid expenditure. These high utilizers typically present with multiple, complex conditions, requiring care coordination across a variety of provider types. This suggests a sustained need for care management, focused on high cost/chronically ill populations.

- Eighty-three percent of expenditure for high cost users is for Elders and Adults with Disabilities. The largest categories of expenditure for high cost users are nursing facilities and residential and rehabilitation facilities for persons with developmental disabilities.

**Utilization**
Individuals covered by both Medicare and Medicaid have dual coverage (“duals”). Medicare is the primary payer for most medical services (e.g. hospital, physician, pharmacy) for 96% of elders and for 48% of adults with disabilities. Medicaid pays for services not paid for by Medicare (e.g. extended nursing home stays, home and community supports). For “non-duals” (persons covered only by Medicaid), Medicaid pays for all covered services.

- For dually-covered elders, nursing home admissions increased 2% per year on average between SFY 2010 and 2012 while hospice admissions per thousand decreased by 2% per year on average. Also, nursing home admissions are five times higher than hospice admissions per thousand.

- Emergency room visits and inpatient admissions per thousand for adults with disabilities covered only by Medicaid are relatively flat over SFY 2010-2012 while office visits per thousand have increased 5% per year on average.

- For children and families and for children with special healthcare needs, acute care utilization measures, such as inpatient admissions, emergency room (ER) admissions, and office visits, have decreased since 2010.

**Variance to Other Reports:** The primary basis for identifying expenditures in this report is the actual date of service rather than paid date. Expenditure amounts used in this report may vary from expenditures reported for financial reconciliation or other purposes. Reasons for variance might include factors such as claim completion and rounding.

   c. Sources and Notes
In fiscal year 2012, Rhode Island incurred approximately $1,783 million in Medicaid expenditures. This expenditure was split between state and federal funds. This report includes all Medicaid expenditures, including both state and federal funds.

The analysis in this report excludes $127 million in DSH (Disproportionate Share Hospital) payments, $33 million in costs not otherwise matchable (CNOM), payments of $19 million to LEAs (Local Educational Agencies) and $12 million in payments to RIPTA (Rhode Island Public Transit Authority). More detail on the DSH, LEA, and CNOM payments is provided in the Appendix.

What follows is a variety of analyses intended to describe the different elements of Rhode Island’s Medicaid program, and provide a common understanding of the key elements of Medicaid expenditure, as well as areas of expenditure growth.
1b. FMAP (Federal Medicaid Assistance Percentage) Trends

The State of Rhode Island is typically responsible for just under half of Medicaid expenditures. State share was reduced due to stimulus funding for SFY 2009-2011, but returned to base levels in SFY 2012.

While this report will review trends in total Medicaid medical expenditure, it is important to recognize that less than half of this expense falls to the Rhode Island budget. Funding is split between state and federal dollars, with Rhode Island typically responsible for just under half of all program expenditures.

Stimulus funding increased FMAP by 11.42% percentage points between October 1, 2008, and December 31, 2010. The stimulus increase resulted in a substantial reduction in the state share of Medicaid expenditure for SFY 2009-11. In SFY 2012, FMAP returned to pre-stimulus levels of 52.33%.

There are two instances of variation from the FMAPS levels shown above:

- The federal match is enhanced for qualifying low income children and pregnant women under the CHIP program. CHIP is designed to build on Medicaid to provide insurance coverage to "targeted low-income children and pregnant women" from families with incomes up to 250 percent of the federal poverty level who are uninsured and not otherwise eligible for Medicaid. In SFY 2011, Rhode Island received a 66.63% combined CHIP/FMAP federal match on 17,839 "optional" children and pregnant women who are in families with incomes above mandatory coverage levels.

- In October 2011, Rhode Island became the second state in the nation to receive federal authority for Health Home services. This authority established two Health Home providers in RI - CEDARR Family Centers and Community Mental Health Organizations. Health Home services are matched at ninety percent (90%) for eight (8) quarters by the federal government.

1. Analysis based on FMAP only – does not include CHIP match. Increase calculated as the difference between actual state expenditure and the amount the state would have spent at the FMAP rate of 52.51% without the federal stimulus increase.
1c. Medicaid Expenditure Trends, SFY 2008-2012

Over the past five years, Rhode Island Medicaid expenditures have been increasing an average 1.3 percent per year.

- Overall Medicaid expenditure has increased by approximately 1.3 percent per year over the last five years. From SFY 2011-2012 expenditures decreased 1.1%.

- Note that the overall expenditure increase is broken down into per member per month (PMPM) cost increases and enrollment increases, which can be added together to determine average expenditure growth.
  - Enrollment decreased from SFY 2008 to 2009 but then increased steadily since then for a five-year average growth of 2.2% per year.
  - PMPM costs increased from 2008 to 2010, but then decreased from 2010 to 2012. Over the five year period, PMPM costs have decreased at an average annual rate of 0.9%.

¹. Calculated as compounded annual growth rate (CAGR) over period SFY 2008-2012 as shown.
1c. Total Medicaid Enrollment and PMPM Cost Trends, SFY 2008-2012

Enrollment had been declining between SFY 2007 and 2009, but in 2010 jumped back to higher than 2007 levels and continued to increase in SFY 2011 and 2012.

- Nearly all of the SFY 2010-2012 increase in total Medicaid expenditure is due to increases in enrollment.
- Between SFY 2006 and 2009 enrollment declined 1-2% per year. However a 4.5% increase in enrollment from SFY 2009 to 2010 brought enrollment back to 2006 levels. Enrollment increased another 3.4% from 2010 to 2011 and 2.1% from 2011-12.
- PMPM costs increased from SFY 2007 to 2008. In 2009 and 2010 PMPM costs continued to increase but at lower rates than previous years. Between SFY 2010 and 2011 PMPM costs declined 2.3% and then declined another 3.1% from 2011 to 2012. Overall PMPM costs are lower in SFY 2012 than they were 5 years ago.
RI Medicaid trends are notably low as compared to national Medicaid and regional Commercial experience.

- Overall expenditure growth over the years 2008-2012 compares very favorably to national Medicaid expenditure trend – according to Centers for Medicare & Medicaid Services (CMS), Medicaid expenditure trend over this time period increased an average 7.5% per year, vs. Rhode Island’s 1.3%.

- RI Medicaid PMPM (per member per month) cost trends also compare favorably to local commercial benchmarks. Between SFY 2008 and 2012, Rhode Island’s Medicaid program experienced a decrease in average annual PMPM cost of 0.9% per year. The average annual commercial medical PMPM cost for Rhode Island commercial health plans over the same period increased 4.0% per year. Nationally, during this same period there has been an increase in high deductible plans and in co-payments by insured subscribers.

- The RI commercial benchmark may be understated because it only includes total incurred claims reported by the carriers, not any out of pocket costs borne by members. Medicaid plans generally have very low, if any, out of pocket costs for members.

2. Expenditure Distributions

Medicaid expenditure can be broken down in several ways.

- Department refers to the state departments responsible for administering components of the Medicaid program. In 2012, the Department of Elderly Affairs (DEA) became a Division under DHS. For the purposes of this report, DHS expenditures pertain to Medicaid expenditure through the Division of Elderly Affairs.

- Provider Type refers to the institution or professionals performing the services.

- Population defines Medicaid recipients by age and category of need.
2a. Expenditure by Department

Medicaid services are administered through several state departments.

- In SFY 2012, the state departments responsible for administering components of the Medicaid program were: the Office of Health and Human Services (OHHS), the Department of Behavioral Healthcare, Developmental Disability and Hospitals (BHDDH), the Department of Children, Youth and Families (DCYF), the Division of Elderly Affairs in the Department of Human Services (DHS), and the Department of Health (DOH).

- The majority of expenditure (77%) was administered by Executive Office of Health and Human Services (EOHHS). This department is the lead administrator for the Medicaid contract with CMS Effective July 1, 2011, the Single State Medicaid Agency was transferred from the Department of Human Services (DHS) to the Executive Office of Health and Human Services (EOHHS).

- The Department of Behavioral Healthcare, Developmental Disability and Hospitals (BHDDH), is the second largest, accounting for 21 percent of Medicaid program expenditures.

- Detail for each department is shown on the next page.
Medicaid benefit expenditure detail for each of the departments is shown below.

- The majority of expenditure (77%) was administered by the Office of Health and Human Services. OHHS funds most traditional Medicaid services, providing funding for hospital-based services (35% of total OHHS expenditure), long term care (30%), professional services\(^1\) (24%), and pharmacy (7%).

- The Department of Behavioral Healthcare, Developmental Disability and Hospitals (BHDDH) accounts for 21% of total Medicaid expenditure. BHDDH expenditures include three primary areas: the management of Slater Hospital, residential facilities for persons with developmental disabilities, and community based behavioral health and substance abuse services.

- The Department of Children, Youth and Families (DCYF), accounts for $37 Million (2%) of Medicaid expenditure. DCYF administers programs serving children in the child welfare system, children in substitute care and children with behavioral health conditions.

---

* The purpose of this report is to provide a comprehensive overview of state Medicaid expenditures to assist in assessing and making strategic choices about program coverage, costs, and efficiency in the annual budget process. Expenditure amounts used in this report may vary from expenditures reported for financial reconciliation or other purposes. Reasons for any variance might include factors such as claim completion and rounding.

\(^1\) Includes professional services for behavioral health.

\(^2\) DD Res/Rehab is Residential and Rehabilitation Services for persons with developmental disabilities, which includes DD Group homes, DD rehabilitation (adult day care and adult day program), and other BHDDH expense (including residential habilitative, day habilitative, adult day program, respite, home modifications and supported employment).

\(^3\) CMHC/SA Rehab is Community Mental Health Centers and Substance Abuse Rehabilitation.
The two largest provider types, accounting for nearly half (46%) of all RI Medicaid expenditure in SFY 2012, were hospitals and nursing facilities (including nursing homes, hospice, and skilled nursing facilities). Key contributors to expenditure growth were hospitals and professional providers.

Hospitals were the largest provider type, accounting for 27 percent of Medicaid expenditures in SFY 2012. Hospital payments have been a key driver of Medicaid expenditure growth – as payments to hospitals increased by an average of 4.0% per year between 2008-2012.

---

1. SNF: Skilled Nursing Facility
2. Professional includes, but is not limited to, Physician, Dental, DME/Supplies, X-Ray/Lab/Tests, and Ambulance.
3. DD Res/Rehab is Residential and Rehabilitation Services for persons with developmental disabilities and includes public and private DD group homes, DD rehabilitation, and other BHDDH expense (including residential habilitative, day habilitative, adult day program, respite, home modifications and supported employment).
4. Professional Behavioral Health includes DHS, BHDDH and DCYF expense including, but not limited to, Professional Mental Health/Substance Abuse, CEDARR (Comprehensive, Evaluation, Diagnosis, Assessment, Referral, Re-evaluation), CMHC, and Residential DCYF.
5. Slater Hospital, Tavares and Zambrano are specialized facilities for severely disabled adults or children.
6. Home and Community Based Services (HCBS) are services provided as an alternative to more costly nursing home/institutional options such as personal care, assisted living, case management and Program of All-Inclusive Care of the Elderly (PACE).
7. Medicaid pays Medicare premiums for qualifying individuals.
### 2c. Expenditure by Population

Medicaid expenditures vary considerably by population.

The Medicaid program served an average of 193,030 eligibles in SFY 2012, at an average cost per member per month of $770. However, PMPM costs vary considerably by population.

- 64% of expenditure is on services for elders and adults with disabilities who together account for 25% of total eligibles. The PMPM costs for elders is over $2,000 per member per month and the PMPM cost for adults with disabilities is over $1,800.
- Services for children and families account for 69% of total enrollment and 27% of total expenditure with a PMPM cost of just under $300.
- Another 10% of expenditure is for children with special health care needs who represent 6% of eligibles at a PMPM of over $1,100.

---

1. Elders include all adults over age 65.
2. Adults with Disabilities includes adults under age 65 who have identified disabilities or complex medical needs (does not include RIte Care enrolled adults).
3. Children and Families includes low income children, parents and pregnant women who meet specific income requirements.
4. Children with Special Health Care Needs (CSHCN) includes children in Substitute (Foster) Care, Individuals eligible for SSI (Supplemental Security Income) who are under 21, Katie Beckett children, and Adoption Subsidy children.
2c. Expenditure By Population: Trends

Expenditure growth varies significantly by population.

Average Annual Growth in Average Eligibles and PMPM Cost
SFY 2008 - SFY 2012

- Elders account for 27% of overall spending in 2012 and have experienced a 2.9% average annual increase in expenditure since 2008. Nearly all of this increase is due to increased PMPM over that time period.

- Adults with disabilities account for the highest share of 2012 expenditure (37%). The average annual growth in expenditure for this group for the last 5 years was 1.6%. All of the increase was due to increases in enrollment.

- Children and families experienced a 3.2% average expenditure growth over the past 5 years with an average enrollment growth of 2.8% and an average PMPM growth of 0.4%. In comparison, Rhode Island commercial PMPM cost trend over the last 5 years is 4.0%.

- Children with special health care needs experienced a decrease in both PMPM and overall expenditure since 2009. This is partly due to programs that have reduced the portion of DCYF youth in residential settings compared to those in community-based settings.

1. For commercial incurred claims from BCBSRI, United Healthcare New England and Tufts Health Plan, includes both large group and small group. Source: Office of the Health Insurance Commissioner (OHIC), 2013 carrier rate filings, exhibit 3.

- Medicaid enrollees who do not have other insurance are enrolled in Medicaid managed care plans. The percentage of managed care enrollees varies by population due to variability in enrollment in outside insurance. For example, the majority of Elders in Medicaid are enrolled in insurance plans through Medicare.

- Children and families were generally enrolled in one of two managed care plans unless they had other insurance coverage (e.g. employer sponsored coverage, Medicare).

- In 2008, enrollment in Medicaid managed care became mandatory for children with special health care needs (CSHCN) without other insurance. About 79% were enrolled in Medicaid managed care in SFY 2012.

- Adult populations have historically been exclusively served in fee-for-service Medicaid. However, two new managed care programs were established in 2008 to transition adults to managed care: Connect Care Choice and Rhody Health Partners. Enrollment in managed care for this population has increased from near 0% to 47% with the introduction of these programs.

1 Includes 11,131 RIte Share members.
3a. Managed Care Enrollment

The 77% of Medicaid eligibles enrolled in managed care plans account for 49% of Medicaid expenditure.

- Three quarters (77%) of all Medicaid eligibles are enrolled in either Medicaid managed care plans under Rite Care and Rhody Health Partners, or enrolled in RIte Share or Connect Care Choice. These “enrolled populations” account for about 49% of Rhode Island Medicaid expenditures.¹

- During SFY 2012 Rite Care and Rhody Health Partners managed care enrollment was divided between Neighborhood Health Plan of Rhode Island (NHPRI) and United Healthcare of New England (UHCNE). Blue Cross Blue Shield of RI ceased participation in RIte Care as of December 2010.

- RIte Share is a program designed to allow Medicaid eligibles with access to qualified employer-based insurance coverage to retain that commercial coverage by having Medicaid pay the employee’s share of the premium. This minimizes Medicaid expenditure by leveraging the employer’s contribution. In SFY 2012, there were 11,131 Medicaid eligibles enrolled in the RIte Share program.

- Connect Care Choice is a program that provides access to advanced medical homes for adults with chronic conditions in order to help coordinate health care needs and link to support services in the community. In SFY 2012, there were 1,712 Medicaid eligibles enrolled in Connect Care Choice.

---

¹ Most of the enrolled population is RIte Care families, which typically are lower cost populations than elders or disabled adults.
3a. Managed Care Quality Indicators

Rhode Island’s participating Medicaid Managed Care Health Plans have consistently ranked among the nation’s top performing Health Plans according to HEDIS® measures (Healthcare Effectiveness Data and Information Set).

Rhode Island Medicaid Managed Care Plan Performance on HEDIS® Quality Measures – CY2011

Red line indicates 90th percentile of all Medicaid plans nationwide
Green line indicates 75th percentile

- **Well-child Visits (6 visits in first 15 mo)**: 82% (90th percentile) vs. national average of 78%
- **Cervical Cancer Screening (Women 21-64)**: 83% (75th percentile) vs. national average of 83%
- **Followup after Mental Illness Hospitalization (30 days)**: 92% (90th percentile) vs. national average of 90%
- **Appropriate Use of Asthma Meds (5-11 year olds)**: 92% (90th percentile) vs. national average of 92%
- **Access to Preventive/Ambulatory Health Svcs (Adults 45-64)**: 92% (90th percentile) vs. national average of 92%

- **In September 2012, the National Committee for Quality Assurance (NCQA) ranked over 227 Medicaid Health Plans nationwide. NHPRI was ranked 5th (87.6%) among Medicaid Health Plans and UHCP-RI was ranked 18th (84.8%).**

- On the HEDIS® measure assessing the percentage of enrollees who had six or more well-child visits during their first 15 months of life, all of RIte Care’s Health Plans ranked above the 90th percentile compared with all Medicaid plans in the nation.

- RIte Care’s Health Plans exceeded the 75th percentile for the past three years on the cervical cancer screening measure (percent of women 21-64 who received Pap tests to screen for cervical cancer).

- RIte Care’s Health Plans equaled the 90th percentile for having an outpatient follow-up mental health service within at least 30 days after discharge from a hospitalization for certain mental health disorders.

- On the HEDIS® measure of children with asthma who were appropriately prescribed medication, RIte Care’s Health Plans are just below the 75th percentile. Children who use asthma medications appropriately can prevent unnecessary emergency department visits and hospitalizations.

- 92% of RIte Care adults ages 45-64 received preventive and primary care visits during the year, which is above the 90th percentile.

1. Monitoring Quality and Access in RIteCare and Rhody Health Partners, RI EOHHS, October 2012. Results are reported in the aggregate, not by individual health plan.
3b. Community Care and Long Term Care

Community care and long term care accounted for $724 million in SFY 2012, about 41% of total Medicaid expenditure.

- The Global Medicaid Waiver subsumed the prior 1915(c) waivers, which granted the state the ability to qualify certain populations who meet specified levels of care for home based services. These programs are intended to allow states to provide home and community based services to at-risk populations as alternatives to more costly nursing home/institutional options.
- Community care accounts for 38% of the total expenditure on home and community based care and long term care. Most of the expenditure on long term care is for nursing homes (72% of long term care expenditures).
- A large portion of the growth in expenditures in community care is on long term services and support, such as attendant/personal care and assisted living. These services are less expensive alternatives to nursing home/institutional options.

---

1 DD Res/Rehab is Residential and Rehabilitation Services for persons with developmental disabilities and includes public and private DD group homes, DD rehabilitation, and other BHDDH expense (including residential habilitative, day habilitative, adult day program, respite, home modifications and supported employment).
2 Other community care includes DME (e.g. Home Modifications), Case Management, Meals and other.

4a. Mandatory/Optional Expenditure Overview

Under federal guidelines, there are “mandatory” populations and services that all state Medicaid programs must cover to receive federal matching payments. However, certain provisions of the Affordable Care Act (ACA) alter these definitions effective in 2014.

* Does not reflect changes in mandatory populations resulting from the Affordable Care Act (ACA)

**Traditional Medicaid Law**
- States may obtain federal matching funds for covering several “optional” groups of individuals and services. Optional services are generally intended to reduce expenditure for mandatory services (e.g., pharmacy is an optional service).
- In addition, Federal guidelines require that optional populations receive the same services as mandatory populations—so states cannot generally eliminate these services for optional populations but retain them for mandatory populations.

**Changes under Health Care Reform**

Under the ACA Medicaid is bound by a maintenance of effort restriction which requires continuation of eligibility for any population eligible as of March 2010 until January 2014.

---

1. Includes $73M in expenditure on Waiver services ($40M for mandatory populations and $33 for optional populations).
2. For example, pharmacy, outpatient behavioral health, and hospice are all sizable components of optional services that, if eliminated, would likely result in offsetting increases in mandatory expenditure.
# 4b. Mandatory/Optional: Services

Federal health reform maintenance of effort restrictions do not pertain to optional services. Optional services are generally intended to reduce expenditure for mandatory services.

### Acute Care
- Physicians’ services
- Laboratory and x-ray services
- Inpatient hospital services
- Outpatient hospital services
- Early & periodic screening, diagnostic and treatment services (EPSDT) for individuals under age 21
- Family Planning and supplies
- Federally qualified health center (FQHC) services
- Rural health clinic services
- Nurse-midwife services to the extent permitted by State law
- Services of certified pediatric and family nurse practitioners to the extent they are authorized to practice under State law

### Institutional Services
- Nursing facility services for individuals 21 and older
- Intermediate care facility services for persons with developmental disabilities (ICF/DD)

### Home and Community Based Services
- Home health care services for any individual entitled to nursing facility care

### Acute Care
- Rehabilitation and other therapies
- Prescription drugs
- Medical care or remedial care furnished by other licensed practitioners
- Clinic services
- Dental services, dentures
- Prosthetic devices, eyeglasses, DME
- Primary care case management
- TB-related services
- Other specialist medical or remedial care

### Institutional Services
- Inpatient/nursing facility services for individuals 65 and over in an institution for mental diseases
- Inpatient psychiatric hospital services for individuals under 21

### Home and Community Based Services
- Home and Community Based Waiver Services
- Other home health care
- Targeted case management
- Respiratory care services for ventilator dependent individuals
- Personal care services
- Hospice Services
- Services furnished under a PACE Program

Source: “Medicaid Enrollment and Spending by ‘Mandatory’ and ‘Optional’ Eligibility and Benefit Categories”, June 2005, Sommers, Ghosh, The Urban Institute
4b. Mandatory/Optional: Optional Services Detail

Most of the expenditure on optional services is designed to reduce expenditure for mandatory services.

Optional and waiver services accounted for $507 Million in total Medicaid expenditure in SFY 2012, approximately 28% of total Medicaid expenditures. Of that, waiver services accounted for $73 million.

The largest component of optional services (40% of optional services expenditure) is residential and rehabilitation services for persons with developmental disabilities, including group homes. These services provide an important alternative to more expensive (mandatory) inpatient/institutional services for those populations.

Under EPSDT provisions, services that are optional for adults are mandatory for children, e.g., pharmacy.

1 DD Res/Rehab is Residential and Rehabilitation Services for persons with developmental disabilities and includes public and private DD group homes, DD rehabilitation, and other BHDDH expense (including residential habilitative, day habilitative, adult day program, respite, home modifications and supported employment).

2 Professional BH includes DHS, BHDDH and DCYF expense including, but not limited to, Professional MH/SA, CEDARR, CMHC, and Residential DCYF.

3 Home and Community Based Services (HCBS) are services provided as an alternative to more costly nursing home/institutional options, such as personal care, assisted living, case management, and Program of All-Inclusive Care of the Elderly (PACE).

4 Professional includes, but is not limited to, E&M, Procedures, Dental, DME/Supplies, X-Ray/Lab/Tests, and Ambulance.

5a. Unique Users

About one-fifth of Rhode Island’s population, or 228,000 Rhode Islanders, were enrolled in Medicaid for some part of SFY 2012.

Unique users is a measure of the number of Rhode Islanders who were enrolled in Medicaid at any time during the fiscal year. So, if a person enrolled, disenrolled, and reenrolled, they would count as one user. Similarly, if a person enrolled for only 1 month, they would be included as a unique user.

Comparing unique users to average eligibles provides an indicator of the role of the Medicaid program in Rhode Island. If the number of unique users is equal to the average eligibles -- that indicates that there is a steady population of eligibles that remain on the program for the full year. If the number of unique users is above the average eligibles (a ratio of >1) -- this indicates Rhode Islanders are using Medicaid for shorter periods of time.

A recent Kaiser Family Foundation study found that 17.4% of Rhode Islanders indicated they had Medicaid coverage compared to 16.5% of residents nationally. Statistics listed for other New England states were comparable - Massachusetts: 20.2%, Connecticut: 13.2%, Vermont: 23.6%, New Hampshire: 7.0%, and Maine: 22.2%.

2. A unique user is an individual associated with a medical claim. Average eligible enrollment is annual FTEs (full time equivalents).
5b. Expenditure by User: High Cost Cases

Medicaid expenditures are highly concentrated, as the top seven percent of Medicaid users account for nearly two thirds (66%) of Medicaid expenditure. On the other end of the spectrum, seventy nine percent of Medicaid users access Medicaid services at a cost of less than $5,000 per year, with an average expenditure of $1,006 per person. Thus, the top 6% of users spent, on average, $66,587 per person in SFY2012, about seventy times as much per person as those in the bottom 79 percent of users.

Additionally, the high cost users have a turnover ratio that is close to one (1.06 for the top 1% of users) – indicating that this population tends to remain on the program for the full year. These high utilizers typically present with multiple, complex conditions, requiring care coordination across a variety of provider types. This suggests a sustained need for care management, focused on high cost/chronically ill populations.

---

1. Expense unassigned by user includes provider payouts, UPL (upper payment limit), Medicare and PACE Premiums, and managed care admin cost.
5b. Expenditure by User: High Cost Cases

Elders and adults with disabilities account for over eighty percent of expenditure for high cost users.

- Expenditure on elders and adults with disabilities accounts for 83% of expenditure on the highest cost users. (High cost users defined as unique users with over $25,000 of Medicaid expense in SFY 2012). Also, high cost user expenditure accounts for 82% of total spending on Elders and 73% of total spending on adults with disabilities.

- The largest category of expenditure for high cost elders is nursing facilities (nursing homes, skilled nursing facilities and hospice), accounting for $289 million (27%) of overall expenditure on high cost users. The largest category of expenditure for high cost adults with disabilities is residential and rehabilitation facilities for persons with developmental disabilities, which account for another $158 million (15%) of overall expenditure on high cost users.

- For children and families, the largest category of expenditure for high cost users is hospital inpatient services, including Neonatal Intensive Care Unit (NICU), accounting for 5% of overall expenditure on high cost users. Professional behavioral health services for children with special health care needs accounts for another 4% of overall expenditure on high cost users.

---

1. Total sums to more than the overall 15,969 high cost unique users due to overlap between eligibility groups.
2. Expense unassigned by user includes provider payouts, UPL (upper payment limit), Medicare Premiums, PACE premiums, and managed care administrative cost.
5b. Expenditure by User: High Cost Cases

Nearly half (48%) of expenditure on high cost users is on nursing facilities and residential and rehabilitation services for persons with developmental disabilities.

- Nursing facilities account for 30% of the expenditure on high cost users, and residential and rehabilitation services for persons with developmental disabilities account for another 18%.
- In addition, expenditure on high cost users accounts for over 90% of total expenditure for nursing facilities, residential and rehabilitation services for persons with developmental disabilities, and Slater Hospital, Zambarano and Tavares).
- Many high cost users are those who are institutionalized year-round.

1. Expense unassigned by user includes provider payouts, UPL (upper payment limit), Medicare Premiums, PACE premiums, and managed care administrative costs.

See page16 for footnotes and definitions of service categories.
Over the past five years the number of higher cost users has been increasing at about the same rate as the average increase in users.

Overall, Medicaid has experienced a 1.7% average annual increase in the number of unique users over the past 5 years. This is slightly less than the increase in average eligibles (2.2% over the same time period).

The increase in users with utilization over $10,000 per year has been about the same as the overall increase in unique users, a 1.8% average annual increase vs. the overall increase of 1.7%.

</tr>
<tr>
<td>Children w/ special health care needs</td>
<td>$170</td>
</tr>
</tbody>
</table>

**Total Expenditure:** $1,783 M

**Provider Types:**
- Hospital Inpatient/Outpatient (IP/OP)
- Nursing Home/Hospice/SNF
- DD Res/Rehab, Group Homes
- Professional
- Professional Behavioral Health
- Pharmacy
- Slater Hospital/ Zambrano/ Tavares
- Home and Community Based Services/PACE
- Premiums

In order to review expenditure by population in more detail, it is useful to look at expenditure by provider type within each population group.

- **Elders** includes adults over age 65.
- **Adults with Disabilities** includes adults under age 65 who have identified disabilities or complex medical needs (does not include R1te Care enrolled adults).
- **Children and Families** includes low income children, parents and pregnant women who meet specific income requirements.
- **Children with Special Health Care Needs (CSHCN)** includes children in Substitute (Foster) Care, Individuals eligible for SSI (Supplemental Security Income) who are under 21, Katie Beckett children, and Adoption Subsidy children.
6a. Elders Detail

Nursing facilities account for approximately two thirds of total expenditure for elders.

Medicaid expenditures on elders totaled $476 Million in SFY 2012, and has been increasing at 2.9% per year over the past 5 years. The large majority of elders are also eligible for Medicare, which was the primary payor for most medical services (e.g. hospital, physician); consequently those expenses were not paid by Medicaid and are not included here.

Nursing facilities (including nursing homes, hospice and skilled nursing facilities) account for nearly two thirds (65%) of total Medicaid expenditure on elders. The increase in nursing home expenditure has been relatively lower than the increase in overall expenditure for this population - an average annual increase of 1.6 percent per year.

Most of the growth in Medicaid expenditure for elders has been in nursing home services and home and community based services. The increase in home and community based services is due in part to an effort to invest in alternatives to institutional/nursing home care.

See footnotes on page 16 for Provider Type definitions and notes.
6b. Adults with Disabilities Detail

For adults with disabilities, residential and rehabilitation services for persons with developmental disabilities, along with hospital services, account for more than half of expenditures.

</tbody>
</table>

- Adult with disabilities account for the largest share of Medicaid expenditures, with total SFY 2012 expenditure of $662 Million. Expenditure for this population has increased by approximately 1.6% per year over the past 5 years.
- Hospital and residential and rehabilitation services for persons with developmental disabilities are the two largest categories of expenditure, accounting for 25% and 26%, respectively, of total Medicaid expenditure on adults with disabilities.
- The provider type with the highest rate of growth in Medicaid expenditure for the adults with disabilities population has been home and community based services.

See footnotes on page 16 for Provider Type definitions.
6c. Children and Families

In the children and families population, hospital and professional services are the largest contributors to expenditure increases.

- Children and families account for about one-fourth (27%) of total Medicaid expenditures, with SFY 2012 expenditure of $474 Million. Expenditure for this population has increased by 3.2% per year over the past 5 years.

- It is important to note that the federal match is enhanced for qualifying low income children and pregnant women under the CHIP program. CHIP is designed to build on Medicaid to provide insurance coverage to "targeted low-income children and pregnant women" from families with incomes up to 250 percent of the federal poverty level who are uninsured and not otherwise eligible for Medicaid. In SFY 2012, Rhode Island received a 66.63% combined CHIP/FMAP federal match on 17,839 "optional" children and pregnant women who are in families with incomes above mandatory coverage levels.

- Most expenditure on children and families is divided between professional and hospital care, with hospital care accounting for over half (52%) of expenditure.

- A major component of expenditure relates to prenatal care and births. Annually, approximately 48% of Rhode Island’s births are covered through RIte Care.¹

---

---

See footnotes on page 16 for Provider Type definitions.
### 6d. Children with Special Health Care Needs

In the population of children with special health care needs, professional behavioral health accounts for nearly half (44%) of all expenditure.

- Children with Special Health Care Needs (CSHCN) is a relatively small population -- accounting for ten percent of total Medicaid expenditures and six percent of enrollees, with total SFY 2012 expenditure of $170 Million.

- Expenditure for this population is dominated by professional behavioral health services, which account for just under half (44%) of total expenditures.

7a. Utilization by Population: Overview

Individuals covered by both Medicare and Medicaid have dual coverage (“duals”). Medicare is the primary payer for most medical services (e.g., hospital, physician, pharmacy) for 96% of elders and for 48% of adults with disabilities. Medicaid pays for services not paid for by Medicare (e.g., extended nursing home stays, home and community supports). For “non-duals” (persons covered only by Medicaid), Medicaid pays for all covered services.

- Ninety-six percent of elders and forty-eight percent of adults with disabilities are covered by both Medicare and Medicaid (called dual eligibles).
- Similarly, 97% of expenditures for elders and 46% of expenditures for adults with disabilities are for dual eligibles.
- For these dual eligibles, Medicare is the primary payer for the majority of services. Medicaid only covers services not paid by Medicare.
- The majority of services covered by Medicaid for dual eligibles are long term care services.
7a. Utilization by Population: Dual-covered Elders

For dual-covered Elders, nursing home and hospice admissions per thousand increased 2% per year from SFY 2010 to 2012.

- Ninety-six percent of elders are covered by both Medicare and Medicaid. Medicare is the primary payer for the majority of acute and primary care services.
- For those covered by both Medicare and Medicaid, nursing home/skilled nursing facility admissions per thousand were 586 in SFY 2012. This number has increased from 563 in 2010.
- Hospice admissions per thousand has decreased for dual-covered elders from 92 per thousand in SFY 2010 to 87 per thousand in SFY 2012.
- Medicare Part D covers most of the pharmacy claims for this population. Medicaid is only responsible for drugs not included in the Medicare formulary. For dual-covered elders, Medicaid was responsible for an average of 6.5 pharmacy claims per eligible in 2012, similar to claims over the last 3 years.
7a. Utilization by Population: Elders

For some Elders home and community based services enable them to remain in a community setting rather than be admitted to or remain in a nursing home. The largest category of community based care for Elders is personal care services.

- The largest category of the community care is for personal care services, with an average of 1,928 recipients in 2012. The daily census for this category has increased at 8% per year for elders covered by both Medicaid and Medicare.
- Some eligibles may be receiving more than one service, resulting in overlap in the average number of eligibles served.
- For the 638 elders covered only by Medicaid, the average daily census for personal care services was 38 recipients. All other categories of community care had an average daily census of less than 15 recipients.
7b. Utilization by Population: Adults with Disabilities

Physician office visits per thousand have increased 5% per year since SFY 2010 for adults with disabilities with Medicaid-only coverage (non-duals).

- Forty-eight percent of adults with disabilities are covered by both Medicare and Medicaid. Medicare is the primary payer for the majority of acute and primary care services. Utilization shown is for the 52% of adults with disabilities without dual coverage.
- Inpatient admissions per thousand and emergency room visits per thousand have remained relatively flat since 2010 for adults with disabilities covered only by Medicaid.
- For those covered only by Medicaid, each eligible averaged 7.2 office visits per year in 2012, up from 6.3 office visits per year per eligible in 2011 and 6.5 in 2010.
7b. Utilization by Population: Adults with Disabilities

Nursing home admissions per thousand have decreased 4% per year since SFY 2010 for adults with disabilities with Medicaid-only coverage.

- Forty-eight percent of adults with disabilities are covered by both Medicare and Medicaid. Medicare is the primary payer for the majority of acute and primary care services. Long term care services are primarily covered through Medicaid.

- For the adults with disabilities covered only by Medicaid, hospice admissions decreased 21% per year and nursing home/skilled nursing facility admissions per thousand decreased 4% per year since SFY 2010.

- Nursing home/skilled nursing facility admissions per thousand for those covered by both Medicare and Medicaid were 73 per thousand for SFY 2012, an increase of 2% per year since 2010.
7b. Utilization by Population: Adults with Disabilities

Adults with disabilities with Medicaid-only coverage averaged 55 pharmacy claims per year in SFY 2012.

Forty-eight percent of adults with disabilities are covered by both Medicare and Medicaid. Medicare Part D covers most of the pharmacy claims for this population. Medicaid is only responsible for drugs not included in the Medicare formulary.

For dual-covered adults with disabilities, Medicaid was responsible for an average of 10 pharmacy claims per eligible in 2012, a decrease of 1% per year over the last 3 years.

For adults with disabilities without Medicare coverage, Medicaid was responsible for 55 claims per eligible in 2011, up from 50 claims per eligible in 2010, an average increase of 5% per year.
7b. Utilization by Population: Adults with Disabilities

Similarly to elders, the largest category of community based care for adults with disabilities is personal care services.

- Forty-eight percent of adults with disabilities are covered by both Medicare and Medicaid. Medicare is the primary payer for the majority of acute and primary care services.
- Large portions of expenditure for case management and for assisted living were paid off-line in SFY 2009, and are not readily attributable to individual recipients. Because of this, during 2009-2011 growth rates cannot be accurately calculated for these areas.
- The largest category of community care is personal care services, with an average of 796 recipients in 2012 for duals and 499 for Medicaid only. The daily census for this category is growing at 9% and 8% per year for non-dual and dual-covered adults with disabilities respectively.
- Some eligibles may be receiving more than one service, resulting in overlap in the average number of eligibles served.

### 7c. Utilization by Population: Children and Families

For children and families in managed care, inpatient admissions per thousand and emergency room and office visits per thousand have all decreased since SFY 2010.

-7% Avg Ann Growth SFY 2010-2012 -4% -2% 1%

- Eighty-six percent of children and families are enrolled in managed care through Medicaid managed care organizations (MCOs). Another 8% are covered by Employer Sponsored Insurance (ESI) through the Rite Share program. Rite Share is not included in the data above.
- Over 65% of inpatient admissions per thousand are maternity related (including maternity, nursery and NICU). Annually, approximately 48% of all RI births are covered through Rite Care1.
- For children and families in managed care, inpatient admissions per thousand and emergency room and office visits per thousand have all decreased since SFY 2010.
- Pharmacy claims per eligible have increased from 10.3 per year in SFY 2010 to 10.5 per year in 2012.

---

For children with special health care needs in managed care, inpatient admissions per thousand and emergency room and office visits per thousand have all decreased since SFY 2010.

- Seventy-three percent of children with special health care needs are enrolled in managed care through Medicaid MCOs.
- More than half (54%) of inpatient admissions per thousand are for behavioral health.
- Office visits per thousand have decreased slightly over the last three years, from 4,085 visits per thousand per year to 4,050 visits per thousand per year. Both inpatient admissions and ER visits have also decreased over the last 3 years.
- Pharmacy claims per eligible have increased at 1% per year over the last 3 years, from 14.5 per year in 2010 to 14.7 per year in 2012.

Appendix A: Exclusions
(1) Disproportionate Share Hospitals (DSH)

Disproportionate share (DSH) Medicaid payments are intended to subsidize the cost of providing care to indigent and very low income people.

A total of $127 million in DSH funds was paid out to hospitals in SFY 2012.

The state’s two largest hospitals – Rhode Island and Women and Infants – together accounted for 56% of total DSH payments.

DSH payments are not included in the Medicaid expenditure analysis in this report.
Appendix A: Exclusions

(2) Local Education Agencies

Local Education Agencies (LEAs) account for $19.0 million in total Medicaid expenditures. 48 school districts participate.

- For LEA expenditures, the non-federal share is paid by the LEAs.
- LEA payments are not included in the Medicaid expenditure analysis in this report.
Appendix A: Exclusions (3) Costs Not Otherwise Matchable (CNOM)

Costs Not Otherwise Matchable (CNOMs) account for $33 million in total Medicaid expenditures.

The largest CNOM expenditure is for uninsured adults with mental illness.

CNOM expenditures are not included in the Medicaid expenditure analysis in this report.

Appendix C: Sources and Notes

Source Data and Analytic method

This report is based on SFY2012 and a five year historical Rhode Island Medicaid claims extract:

- Includes claims, capitation payments, premiums and provider payouts.
- Reflects data based on date of service with an estimate for IBNR (incurred but not reported) for claims paid through November 2012
- Capitations, premiums and payouts are allocated to Medicaid coverage groups, service types and care setting based on respective claims and payout information with IBNR.

Variance to Other Reports

The purpose of this report is to provide a comprehensive overview of state Medicaid expenditures to assist in assessing and making strategic choices about program coverage, costs, and efficiency in the annual budget process. Expenditure amounts used in this report may vary from expenditures reported for financial reconciliation or other purposes. Reasons for any variance might include factors such as claim completion and rounding.
